

METHOD, APPARATUS AND SYSTEM HANDLING UNRELIABLE
FEEDBACK INFORMATION IN A WIRELESS NETWORK

ABSTRACT

The present invention provides a method, apparatus and system for handling unreliable feedback information in a wireless network. The present invention adjusts one or more communications (202) with a receiving unit (272) in a wireless communication network by receiving feedback information (302) relating to the receiving unit (102), determining a feedback information offset for the receiving unit (272), and adjusting the one or more communications (202) with the receiving unit (272) based on the feedback information and the feedback information offset (306).
